Product-Focused Senior .NET / C# Engineer (remote or hybrid)

Professional Summary

Experienced, product-focused .NET engineer with over ten years building and modernising business-critical applications across C#, ASP.NET, Blazor and modern .NET, including significant work improving and extending legacy systems. I'm at my best when I can understand a real business problem, spot where something isn't working as well as it could, and design and build the right solution - from extending legacy systems to creating new applications from the ground up. I communicate comfortably with team members, users and stakeholders, translate needs into clear designs, and build across the full lifecycle with autonomy, clear communication and accountability. Recent work includes modern .NET, cloud, distributed systems and practical AI integration, and I'm looking for roles where I can use that experience to improve and modernise important applications.

Key Skills

.NET & Web Development
C#, ASP.NET Core, Blazor, MudBlazor, Razor, MVC, Entity Framework, LINQ, WebAPI

Cloud & Infrastructure
Azure SQL Database, Azure Static Web Apps, AWS (Localstack), Docker, CI/CD (GitHub Actions, Jenkins)

AI & Modern Development
RAG pipelines, LLM integration (Ollama), Natural-Language-to-SQL generation, Playwright testing

Data & Storage
SQL Server, PostgreSQL, MySQL, Oracle, MariaDB, schema design, performance tuning, multi-database environments

Tools, Testing & Collaboration
Teams, Slack, GitHub, GitHub Actions, Jenkins, Docker, DBeaver, PowerShell, xUnit

History

01/2025 – Present | Software Developer (Up-skilling & Project Work)

Focused on modernising skills and delivering practical project work across cloud, AI, and distributed systems.

- Built cloud-native applications using AWS-compatible services (Localstack DynamoDB, S3, MinIO) and modern distributed-system patterns.

- Designed and deployed Azure SQL Database instances, including schema creation, firewall rules, SSMS integration, and secure connectivity for .NET applications.
- Developed Playwright UI tests and containerised workloads with Docker, supported by CI/CD pipelines in Jenkins and GitHub Actions.
- Created document-aware RAG AI prototypes using Ollama and local LLMs, including embedding and retrieval workflows.
- Built a natural-language-to-SQL engine generating safe, dialect-aware SQL from free-form queries, with optional speech-to-text input to improve accessibility.
- Refactored a legacy application to .NET Core, modernising the codebase.
- Redesigned and deployed a cloud-native personal website using Azure Static Web Apps, Blazor/MudBlazor, GA4 telemetry, and automated GitHub Actions deployments.
- Built multiple versions of a .NET application targeting different databases (SQL Server, PostgreSQL, MySQL, MariaDB, Oracle), generating database-creation SQL per engine and handling dialect differences.

04/2023 – 12/2024 | Software Developer | STM Group | Fully Remote

Sole developer responsible for a large Blazor Server / MudBlazor application supporting business-critical workflows, alongside ongoing BAU enhancements and operational support.

- Led the design, development, and maintenance of a complex Blazor Server application, owning the full lifecycle from architecture to deployment.
- Delivered new features, BAU enhancements, and stability improvements across multiple business-critical workflows.
- Built a standalone console application integrating with a third-party service, including data retrieval, transformation, and persistence for display within the Blazor UI.
- Delivered a robust data-transfer solution after a late change in third-party readiness, pivoting from an API-based design to CSV-over-FTP to ensure continuity of business operations.
- Identified missing business requirements and designed a Blazor UI enabling colleagues to view returned data, action failed transfers, and manage operational workflows more effectively.
- Served as the department's Blazor subject matter expert, mentoring colleagues and raising team capability in modern .NET development.
- Investigated and scoped a potential migration to Umbraco.
- Collaborated closely with stakeholders to clarify requirements, refine workflows, and deliver solutions aligned with business needs.

12/2021 – 03/2023 | Software Developer | Powwr | Fully Remote

Worked across a suite of large ASP.NET applications, delivering enhancements, fixes, and modernisation work.

- Delivered bug fixes and functional enhancements across multiple ASP.NET applications, improving stability and user experience.
- Investigated and resolved complex issues in legacy codebases, ensuring continuity for business-critical processes.
- Designed and built a Blazor proof-of-concept demonstrating modern .NET capabilities and presenting the solution to senior management.
- Collaborated with product and business teams to clarify requirements and ensure changes aligned with operational needs.
- Contributed to improvements in code quality, maintainability, and development practices within the team.

05/2021 – 12/2021 | Full Stack Developer | Stepstone Ltd | Fully Remote

Delivered change requests and enhancements across Stepstone's job-site platforms, working across backend APIs and frontend components.

- Implemented changes and new features across multiple C# WebAPI services, ensuring reliability and alignment with business requirements.
- Investigated and resolved defects across the full stack, improving stability and user experience.
- Collaborated with product owners and developers to clarify requirements and deliver changes efficiently within an established release cycle.

11/2018 – 09/2019 | Web Application Developer | NATS | Hybrid

Contract role delivering enhancements across several internal ASP.NET applications, including a complex multi-stage workflow system.

- Delivered change requests and new features across multiple ASP.NET applications, including a six-stage workflow used by operational teams.
- Built strong relationships with stakeholders to ensure requirements were clearly understood and solutions aligned with operational needs.
- Produced clear, detailed documentation for each application, improving maintainability and knowledge transfer within the team.
- Introduced Entity Framework to a department reliant on legacy ADO.NET patterns, demonstrating its benefits and leading the transition.

2014 –2019 | Web Application Developer (multiple contracts) | Marston Book Services Ltd | Hybrid

Delivered enhancements, modernisation work, and regulatory updates across several internal ASP.NET applications.

- Implemented features and updates to support regulatory and operational requirements.
- Modernised legacy codebases, improving maintainability and reducing technical debt.
- Delivered bug fixes, performance improvements, and day-to-day support across multiple systems.
- Collaborated with stakeholders to clarify requirements and ensure reliable delivery.

Earlier Experience (2011–2013)

Delivered multiple contract roles across sectors including publishing and property.

- Developed ASP.NET applications, implemented new features, and resolved defects in business-critical systems.
- Frequently invited back by previous clients, reflecting strong performance, trust, and reliability.
