Key_Skills

Core Development

C#, ASP.NET, Blazor, MudBlazor, Entity Framework, SQL Server, PostgreSQL, Azure SQL Database (provisioning, configuration, SSMS integration), WebAPI, Razor, MVC, Bootstrap, JavaScript, HTML, CSS, .NET Core Identity, xUnit

Tools & DevOps

Docker, GitHub Actions, CI/CD, Jenkins, PowerShell, IIS, LinqPad, Exceptionless, Teams, Slack, DBeaver (multi-database development)

Cloud & Infrastructure

AWS (Localstack, S3, MinIO), Azure SQL Database, Azure Static Web Apps, Azure Networking & Firewall Rules, SPA Telemetry (GA4)

AI & Modern Development

RAG AI, LLM Integration (Ollama + local models), Playwright, Copilot, Scalar

Personal Profile

- 10+ years' experience delivering web applications using C#, .NET, SQL Server and modern front-end technologies (MVC, Razor, Blazor), with a strong focus on maintainability and architectural clarity.
- Skilled at translating business requirements into scalable, reliable solutions, engaging directly with stakeholders to refine workflows and deliver real operational value.
- Collaborative engineer with a track record of mentoring colleagues, raising team capability, and promoting predictable, testable development practices aligned with business and regulatory needs.

History

01/2025 – Present | Software Developer (Up-skilling & Project Work)

- Built a cloud-native application using AWS-compatible services (Localstack DynamoDB, S3, MinIO) and modern distributed-system patterns.
- Designed and deployed an Azure SQL Database instance, including schema creation, secure firewall configuration, SSMS integration, and application-side connectivity for a .NET cloud application.

- Developed Playwright UI tests and containerised workloads with Docker, supported by CI/CD pipelines in Jenkins and GitHub Actions.
- Created document-aware RAG AI prototypes using Ollama and local LLMs, including embedding and retrieval workflows.
- Refactored my Vulnerable Client Admin (VCA) application to .NET Core Identity, modernising authentication and authorisation.
- Redesigned and deployed a cloud-native personal website with Azure Static Web Apps, Blazor/MudBlazor, GA4 telemetry, and automated GitHub Actions deployments.
- Built a full multi-database development environment (SQL Server, PostgreSQL, MySQL) using Docker and DBBeaver, including TCP/IP configuration, port management, and cross-engine connectivity for local and cloud-hosted applications.

04/2023 – 12/2024 | Software Developer | STM Group

Sole developer responsible for a large Blazor Server / MudBlazor application supporting business-critical workflows. Key contributions included:

- Led the design, development, and maintenance of a complex Blazor Server application, owning the full lifecycle from architecture to deployment.
- Delivered multiple new features and enhancements, resolving complex issues and ensuring stability for business-critical operations.
- Built a standalone console application to integrate with a third-party service, including data retrieval, transformation, and persistence for display within the Blazor UI.
- Acted as the department's Blazor subject matter expert, mentoring colleagues and raising the team's capability in modern .NET development.
- Investigated and scoped a potential migration of an existing site to Umbraco, providing architectural recommendations.
- Collaborated closely with stakeholders to clarify requirements, refine workflows, and deliver solutions aligned with business needs.

12/2021 – 03/2023 | Software Developer | Powwr

Worked across a suite of large, complex web applications, delivering enhancements, fixes, and modernisation work. Key contributions included:

- Delivered bug fixes and functional enhancements across multiple ASP.NET web applications, improving stability and user experience.
- Investigated and resolved complex issues in legacy codebases, ensuring continuity for business-critical processes.
- Designed and built a proof-of-concept Blazor application, demonstrating modern .NET capabilities and presenting the solution to senior management.
- Collaborated with product and business teams to clarify requirements and ensure changes aligned with operational needs.
- Contributed to ongoing improvements in code quality, maintainability, and development practices within the team.

05/2021 – 12/2021 | Full Stack Developer | Stepstone Ltd

Delivered change requests and enhancements across Stepstone's job-site platforms, working across backend APIs and frontend components. Key contributions included:

- Implemented changes and new features across multiple C# WebAPI services, ensuring reliability and alignment with business requirements.
- Investigated and resolved defects across the full stack, improving stability and user experience.
- Collaborated with product owners and other developers to clarify requirements and deliver changes efficiently within an established release cycle.

11/2018 – 09/2019 | Web Application Developer | NATS

Contract role delivering enhancements across several internal applications, including a complex multi-stage workflow system. Key contributions included:

- Delivered change requests and new features across multiple ASP.NET applications, including a complex six-stage workflow used by operational teams.
- Built strong relationships with stakeholders, ensuring requirements were well understood and solutions aligned with operational needs.
- Produced clear, detailed documentation for each application, improving maintainability and knowledge transfer within the team.
- Introduced Entity Framework to a department still reliant on legacy ADO.NET patterns, demonstrating its benefits and leading the transition.
- Delivered multiple EF training sessions — both group and one-to-one — and created a dedicated EF training application to help the team understand the new architecture.
- Assisted other developers with code reviews and refactoring, helping to reduce technical debt and improve performance across the codebase.
- Advocated for modern development practices to simplify the codebase, improve readability, and enhance long-term maintainability.

2014–2019 | Web Application Developer (multiple contracts) | Marston Book Services Ltd

Delivered enhancements, modernisation work, and regulatory updates across several internal ASP.NET applications.

- Implemented features and updates to support regulatory and operational requirements.
- Modernised legacy codebases, improved maintainability, and reduced technical debt.
- Delivered bug fixes, performance improvements, and day-to-day support across multiple systems.
- Collaborated with stakeholders to clarify requirements and ensure reliable delivery.

Earlier Experience (2011–2013)

Delivered multiple contract roles across sectors including publishing, property, and enterprise software.

- Developed ASP.NET applications, implemented new features, and resolved defects in business-critical systems.
- Frequently invited back by previous clients, reflecting strong performance, trust, and reliability.
